

Business Card Scanning Technology

ELIMINATE TIME-CONSUMING AND ERROR-PRONE MANUAL CUSTOMER ENTRY

High-speed card scanner

- Scan each card in less than ten seconds.
- Add new customer information instantly.
- Eliminate tedious typing of addresses, phone numbers and email addresses.

Print a card image on each Order

- Know exactly who came into your showroom and wrote the order.
- No need to staple the customer's card to each order.

We are continually looking for ways to make OrderXpert faster and have developed this new technique to dramatically reduce the time spent entering customer information. Now you can send your customers on their way as quickly as possible and tend to other customers. Everyone will certainly be impressed not only with the speed in which orders are processed, but also with this seemingly magical technology.

You can also use your card scanner after your trade show to scan business cards into your contact management software, including Outlook, ACT!, Palm Desktop, Windows Mobile, Goldmine, and others.
